

Microplastics have been found in the digestive systems of humans and animals.

Plastic pollution is evident all across the globe, from the highest mountain to the deepest ocean trench.

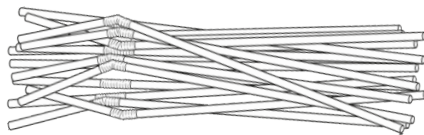

Single-use plastic products can take up to 500 years to biodegrade.

World Environment Day

# Beat Plastic Pollution

It is estimated that 11 million tonnes of plastic currently enters the oceans each year.

The production of plastics is a cause of global climate change.

Half of all plastic produced is designed to only be used once and then thrown away.
